1. General

1.1 General

1.1.1 Economic Efficiency Law

In accordance with the Economic Efficiency Law (Legislative Amendments to Achieve Budget Targets for Fiscal Years 2023 and 2024) 5723-2023, it is stipulated that as of the effective date of the law, an allocation number from the Tax Authority will be required for tax invoices **as a condition** for input tax deduction.

Allocation numbers can be obtained by contacting the designated service via the invoice issuer's API. Those who use manual invoice books will be given the option to receive an allocation number in the ITA's designated application, by typing in the invoice details.

The first year of the law's implementation will be considered a pilot period. The pilot phase is set for the period 1/1/2024-31/12/2024. During the pilot period, each invoice will receive an allocation number, except for technical errors.

It should be emphasized that software providers may use external intermediary services developed by other manufacturers/suppliers as off-the-shelf products in order to send requests to the Tax Authority's API services.

Version updates must be distributed to all software users prior to the start of 2025.

1.1.2 Additions and Changes – 2nd Edition

Further to the document on the Israel Invoice Model, Edition 7/2023, an updated document replacing the previous document is presented below, and the new sections in relation to the original document are highlighted.

The allocation services Approval, MultiApproval (see Section 2) will be operated in their new version (V2) during August 2024 in conjunction

with their current version (v1) up until 31/12/2024. Following that date, the versions of the current allocation services (v1) will be discontinued.

Please note that all input fields in v2 versions will be recorded in lowercase only!

In this document, reference was added, among others, to the application for an API service to update a decision in the case of a held invoice.

1.2 Disclosure Obligation

The disclosure obligation applies when four of the following conditions are met:

- *The invoice amount before VAT is greater than:*
 - *In 2024 – the amount before VAT is greater than NIS 25,000 (during the pilot period).*
 - *In 2025 – the amount before VAT is greater than NIS 20,000.*
 - *In 2026 – the amount before VAT is greater than NIS 15,000.*
 - *In 2027 – the amount before VAT is greater than NIS 10,000.*
 - *In 2028 – the amount before VAT is greater than NIS 5,000.*
- *The invoice includes a non-zero VAT component.*
- *The customer is a "licensed dealer".*
- *The customer has requested an allocation number.*

However, an allocation number for each invoice may be requested, for any amount and for each customer including credits.

1.3 Invoicing Process

- **New**** As of 2025 a reference number will become mandatory.
- Each request must include a single-value Invoice_ID number, as well as the information specified in Table 1.

1.4 Invoice hold **New****

At the end of the pilot period, invoices may be held in accordance with the Tax Authority's decision. In a situation where an invoice is held, the software manufacturers must offer the user alternatives and update the tax authority as specified in Section 2.2.2.

1.5 Authentication

All services are powered by an OAuth2 protocol. For further information, see section on "Authenticating and receipt of a token" in the User Manual:

<http://secapp.taxes.gov.il/OpenApiUserGuide/OpenApiUserGuide.pdf>

2. Invoice Number Allocation Service (Supplier's Side)

2.1 Invoicing Process

- **New**** Please contact the service for an invoice allocation number when the invoice already bears the reference number.
- Any request related to invoices must include a single-value Invoice_ID as well as the information specified in Table 2.1.

2.2 Return of Allocation Numbers

2.2.1 Obtaining an allocation number

Insofar as the service returns an allocation number follow these steps:

- Saving the allocation number in the invoice record.
- Printing the assignment number on the invoice with a clear highlighting of the 9 right digits under the heading "Allocation Number:", in addition to the internal reference number set by the accounting software.

To make it easier for account managers - it is permissible and even recommended to print only the 9 digits on the right.

- Include the 9 right-most digits in the designated field as part of the detailed report.

2.2.2 Held Invoice / Failure to Receive an allocation number **New ****

If the service did not return an allocation number (substantive and non-technical delay) the accounting software will present the user with **4 alternatives to choose from**.

The Tax Authority must be updated with the alternative selected (Section 4):

- **First alternative: abandonment/revocation of the invoice**

Revocation of the invoice will be carried out in the usual manner. The dealer may not apply for a hearing after the “lock-in” of the cancelled invoice.

Storno action to revoke tax invoice (income):

Insofar as the supplier wishes to revoke a tax invoice the guideline is to exclude the invoice and the cancellation from the PCN874 file

▪ **Second alternative: continued generation of the invoice without an allocation number**

The process of generating the invoice will be concluded in the file.

This invoice will include the following sentence appearing prominently: **"Input tax should not be deducted in respect of this invoice"**.

The supplier may retroactively submit a request for a hearing in respect of an invoice that was held through the service portal. Insofar as a request has been submitted for a hearing in respect of the invoice as a result of which the invoice was permitted, a further application for an allocation number with the same Invoice_Id as the original invoice should be made.

The allocation number received will be updated in the system. Instructions for bookkeeping will be amended for granting the permit to update the allocation number in the permanent file.

▪ **Third alternative: reverse charge**

Upon obtaining the customer's consent (in any way agreed between the parties), the reverse charge action will be executed:

By means of a special request with a zero-rate invoice to the **service for receipt of an invoice allocation number**.

The invoice will bear the **same details** (other than the reference number and tax amount) with the same Invoice_Id included in the original invoice and the value 3 in the action field.

As a result of the additional request, a special allocation number will be obtained and executed as follows:

- Storno operation will be performed to cancel the original invoice
- An invoice shall be issued at zero rate as aforesaid that shall be "locked" in the file and shall bear a special allocation number.

- The printout of the invoice will include a caption: "**Customer must self-report this invoice**"

Clarification: A zero-rate invoice will receive a reference number in accordance with the accepted rules.

- **Fourth alternative: Request for Hearing**

The dealer submits a request for a hearing through the tax authority's service channels. Insofar as following such hearing, the invoice is permitted, a repeat application must be made to the ***service for receipt of an allocation number***.

When choosing this alternative, the supplier will be presented with a link to the service portal (application).

2.3 Service Description:

Approval

		VAT, net of discount				
10	vat_rate	VAT rate	N2.2	O		1268
11	vat_amount	Total VAT amount	12.2N	O		1277*

* The field does not exist in the uniform file structure as of the document's date of publication, but will be added in the future.

** The first character is used to indicate goods (1) or services (2). Credit for goods (3) or services (4).

5 additional characters indicate the subcategory, as attached in the Subcategory Appendix.

*** In an invoice with items credited, a negative amount must be reported alongside a unit price at its absolute value.

Table 2.3: Essence of Codes

Line Item	Explanation	Code
Required field	If the field is not filled out, the movement is not recorded.	M
Mandatory/ optional field	If the field exists in the system, it must be filled out.	M/O
Future field	Not required at the moment. May be required in the future	F
Conditional mandatory field	If the condition for the field is met, the field is mandatory.	CM

Table 2.4: Classification of goods: This table will be updated according to the main classification in the customs tariff

Item classification code	Item type
00001	Animals; products from animals
00002	Herbal Products
00003	Fats and oils from animals, plants or microbial and decomposition products; edible processed fats; waxes from animals or plants
00004	Processed food preparations; beverages, alcohols and vinegar; tobacco and processed tobacco substitutes; products containing nicotine, or not, intended for inhalation without burning; other products containing nicotine intended for nicotine consumption in the human body
00005	Mineral products
00006	Products of the chemical and related industries
00007	Plastic and items therefrom; rubber and items therefrom
00008	Raw hides and skins, tanned leather, fur skins and articles thereof; saddlery and harness; travel goods, handbags, and similar containers; articles made from animal gut (excluding silk worm gut).
00009	Wood and wood items; charcoal and wood; cork and cork items; straw products, from esparto or other weaving materials; wicker and weaving products

Item classification code	Item type
00010	Pulp from wood or other cellulose fiber material; paper or cardboard waste and scrap for recycling; paper and cardboard and items derived therefrom
00011	Textiles & Textile Products
00012	Footwear, headgear, umbrellas, sun umbrellas, walking sticks, seat sticks, whips, riding whips, and parts thereof; processed feathers and articles made with feathers; artificial flowers; articles of human hair.
00013	Items from stone, plaster, cement, asbestos, mica, or similar materials; ceramic products; glass and glass products
00014	Natural or cultured pearls, precious or semi-precious stones, precious metals, metals attached to precious metal; imitations of jewelry; coins
00015	Simple metals and items from simple metals
00016	Machines and mechanical appliances; electrical equipment; parts thereof; recorders and reproducers for sound, recorders and producers of image and sound for television and parts and accessories of such items
00017	Vehicles, aircraft, vessels and equipment related to transportation
00018	Optical, photographic, cinematographic, medical or surgical tools and instruments, measuring instruments, testing or accuracy; clocks; musical instruments; their parts and accessories
00019	Weapons and ammunition; their parts and accessories
00020	Miscellaneous manufactured items
00021	Art, collectibles, and antiques
99999	Others

Additional notes:

1. When it comes to a periodic invoice based on delivery notes, the details of the invoice are not available.
2. The delivery note numbers should be written in the "Item number" field (1259), similar to autonomous invoices.
3. Licensed dealer number and customer name are mandatory when required by law.
4. All the fields in the uniform file marked with an asterisk (*) are fields that do not exist in the file in a uniform format

Table 2.5: Types of documents

Document Code In the uniform file	Document Type	Allocation Number *	Notes
300	Invoice/transaction invoice	No	
305	Tax invoice	Yes	
	Tax invoice I	No	Future, does not exist in the file in a uniform structure (invoice for a Palestinian customer)
310	Periodic tax invoice	Yes	
320	Tax invoice/receipt	Yes	
330	Credit tax invoice	No	
331	Credit tax invoice I	No	Future use, not available in the uniform file
332	Pro forma invoice	Yes	See explanation in Article 3.5
340 ^{New**}	Reservation Tax Invoice	Yes	

Document Code In the uniform file	Document Type	Allocation Number *	Notes
345 new**	Agent Tax Invoice	Yes	
348 new**	Log command	Yes	*

* Log command, will allow the bookkeeper to enter the mandatory fields in the invoice into the log command, and receive allocation numbers. Required fields are: Dealer Number (Supplier), Reference Type, Reference Number, Invoice Date, Customer Dealer Number, VAT Amount, and Pre-VAT Amount.

Success Response

Http code	Http Message	More Information	Example
200	OK	An approved invoice will receive a confirmation number	<pre>{ "status": 200, "message": "Invoice approved", "confirmation_number": "20240627231846297178091822", "approved": true }</pre>
		If the value of the confirmation number is 0, or the value of the "approved" output field is false - check the error list. Error number 460 means the data is correct but the invoice is not approved. In this case, the options of how to continue should be represented to the user (as documented at paragraph 4).	<pre>{ "status": 200, "message": { "errors": [{ "code": 460, "message": "Invoice not approved", "param": "vat_number", "location": "approval" }] }, "confirmation_number": "0", "approved": false }</pre>

		Error number 461 means the unapproved invoice exists but no decision was sent. In this case, the options of how to continue should be represented to the user (as documented at paragraph 4).	<pre>{ "status": 200, "message": { "errors": [{ "code": 461, "message": "The unapproved invoice exists . No decision was sent", "param": "invoice_id", "location": "approval" }] }, "confirmation_number": "0", "approved": false }</pre>
		Error number 462 means the unapproved invoice exists and the decision was sent. No further action needed.	<pre>{ "status": 200, "message": { "errors": [{ "code": 462, "message": "The unapproved invoice exists and decision was sent." "param": "vat_number", "location": "approval" }] }, "confirmation_number": "0", "approved": false }</pre>
400	Bad request	Incorrect received data. check the error list.	Example 1: <pre>{ "status": 400, "message": { "errors": [{ "code": 434, "message": "Invoice date is too old for a pproval", "param": "invoice_date", "location": "request" }] }, "confirmation_number": "0", "approved": false }</pre> Example 2: <pre>{ "status": 400, "message": { "errors": [{ "code": 431, "message": "VAT Number is incorrect", "param": "vat_number", "location": "request" }] }, "confirmation_number": "0", "approved": false }</pre>

--	--	--	--

Error responses

See chapter 5

2.4 Special Allocation for Dealers Reporting Cash-Based Transactions

In certain cases, the VAT law allows you to issue a tax invoice only after receiving the money from the customer. In cases where the customer will require the supplier to approve a transaction prior to payment, the supplier will be able to request an allocation **confirmation** through the preliminary document: transaction/pro-forma account - Document Code 332 (Table 2.2). The confirmation number will appear on the preliminary document with a note saying: "***Input tax for this document cannot be offset***".

The customer will be able to verify, prior to paying the supplier, whether approval of allocation for the transaction was received in the personal area. Only when the preliminary document is converted to one or more tax invoices will the resulting allocation number be printed on the tax invoices. To associate tax invoices to their respective preliminary documents, send an action request to the service (action=4) when a tax invoice bears the ***ID of the preliminary document (Invoice_ID)***.

In respect of a refused "Allocation Approval" request, the alternatives listed in Section 2.2.2 may be used except for the reverse charge alternative.

Clarification – It is possible that, in respect of any specific transaction that received prior approval, several tax invoices will be issued whose total amount will be limited to the amount of the initial allocation given to the specific transaction.

2.5 Multiple allocations for invoice list

As needed, it is possible to send a single request to the service which includes a batch of invoices and receive allocation numbers for all invoices that are part of the request.

Each request shall include summary information as detailed in Table 2.6 and a list (Invoices_List) of the information as detailed in Tables 2.1 and 2.2

2.6 Return of allocation numbers for invoice lists

The service will return a list of allocation numbers associated with the single-value invoice number (Invoice_ID) of each invoice in the batch.

Insofar as an invoice has received an allocation number, one must act as specified in Section 2.2.1.

To the extent that an invoice has received an error code(s), the issue must be corrected and the invoice resubmitted separately.

2.7 Service Description

3. Service for Retrieving Allocated Invoice Details (Customer's Side)

3.1 General

This service will be enabled on the customer side (the invoice recipient) in order to obtain information about an invoice received and to streamline the process of entering the invoice information in the customer's account system.

There are 2 ways to apply:

1. Retrieving the invoice information using the allocation number as specified in Section 3.2
2. Retrieving the allocation number using the invoice details as specified in Section 3.3

3.2 Description of invoice information retrieval service using allocation number:

The service will receive parameters according to Table 3.1 and retrieve the invoice details according to tables 3.2 + 2.2

Invoice-Information/details

Version and status	V1.0(beta)
Sandbox url	https://ita-api.taxes.gov.il/shaam/tsandbox/invoice-information/v1/details
Production Url	https://openapi.taxes.gov.il/shaam/production/invoice-information/v1/details
Authorizations	OAuth2: User Restricted
Header Parameters	Accept optional,
Application/json	Content-Type optional
Request Body Schema	Application/json

Request:

Table 3.1

Serial	API Field Name	Field Description	Field Type	H/R	Notes	Uniform File Field Number
1	Customer_VAT_Number	Customer's licensed dealer number	N9	M	Recipient's customer number	1215
2	Confirmation_Number	Invoice allocation number	A30	M	You may send the shortened number (9 right-most digits), or any allocation number received when the document was issued.	
3	Vat_Number	Invoice issuer's licensed dealer number	N9	CM	Mandatory only if a request for supplier number appear in the reply. Recommended to always be sent.	1202

Success Response:

Http code	Http Message	More Information	Example
200	OK	Invoice information as described in tables 3.3 and 2.2	<pre>{ "Status": 200, "Message": { "Invoice_Type": 305, "Vat_Number": 18, "Union_Vat_Number": 55, "Invoice_Reference_Number": "888", "Customer_VAT_Number": 777777715, "Customer_Name": "חשד", "Invoice_Date": "2023-04-16", "Invoice_Issuance_Date": "2023-04-16", "Amount_Before_Discount": 10000.8, "Discount": 1700.14, "Payment_Amount": 8300.64, "VAT_Amount": 90, "Payment_Amount_Including_VAT": 10000.8, "Invoice_Note": "הערות", "Items": [{ "Index": 5,</pre>

			<pre> "Catalog_ID": "123456789", "Category": 1, "Description": "תיאור", "Measure_Unit_Description": "קילו", "Quantity": 50, "Price_Per_Unit": 5, "Discount": 1, "Total_Amount": 250, "VAT_Rate": 17, "VAT_Amount": 42.5 }, { "Index": 6, "Catalog_ID": "123456789", "Category": 1, "Description": "תיאור", "Measure_Unit_Description": "קילו", "Quantity": 50, "Price_Per_Unit": 5, "Discount": 1, "Total_Amount": 250, "VAT_Rate": 17, "VAT_Amount": 42.5 }] } </pre>
		For correct information please send VAT number	
200	ok	Cannot retrieve information	<pre> { "Status": 200, "Message": "Cannot retrieve information" } </pre>

Error Response

See chapter 5

Table3.2

Serial	API Field Name	Field Description	Field Type	Notes	Uniform File Field Number
1.	Invoice_Type	Document type	N4	According to the document types in Table B1	1203
2.	Vat_Number	Invoice issuer's licensed dealer number	N9	If reporting in a dealers' union, the dealer number and not the union number	1202
3.	Union_Vat_Number	The document issuer's VAT dealer number	N9	Included when the dealer (document issuer) reports in a dealers' union, partnership, etc.	1236*
4.	Invoice_Reference_Number	Document (reference) number	A20	Mandatory if issued to permanent file	1204
5.	Customer_VAT_Number	Customer's licensed dealer number	N9	When the customer is a licensed dealer	1215
6.	Customer_Name	Customer name	A25		1207
7.	Invoice_Date	Document date YYYY-MM-DD	A10	The date printed on the document	1230
8.	Invoice_Issuance_Date	Date of issuance YYYY-MM-DD	A10	The document's date of issuance, which is an automatic date generated by the system and cannot be changed by the user	1205
9.	Amount_Before_Discount	Amount before discount	N12.2		1219
10.	Discount	Discount	N12.2	Absolute value – note the discount amount without a minus sign.	1220
11.	Payment_Amount	Total amount excl. VAT	N12.2		1221
12.	VAT_Amount	Total VAT amount	N12.2		1222
13.	Payment_Amount_Including_VAT	Total amount incl. VAT	N12.2		1223
14.	Invoice_Note	Notes	A100		

3.3 Description of allocation number retrieval service using invoice details:

The service will receive parameters according to Table 3.3 and will return the invoice allocation number

Invoice-Information/confirmationNumber

Version and status	V1.0(beta)
Sandbox url	https://ita-api.taxes.gov.il/shaam/tsandbox/invoice-information/v1/confirmationNumber
Production Url	https://openapi.taxes.gov.il/shaam/production/invoice-information/v1/confirmationNumber
Authorizations	OAuth2: User Restricted
Header Parameters	Accept optional,
Application/json	Content-Type optional
Request Body Schema	Application/json

Request:

Table 3.3

Serial	API Field Name	Field Description	Field Type	H/R	Notes	Uniform File Field Number
1	Customer_VAT_Number	Customer's licensed dealer number	N9	M	Recipient's customer number	1215
2	Vat_Number	Invoice issuer's licensed dealer number	N9	M		1202
3	Payment_Amount	Total amount excl. VAT	N12.2	M		1221
4	VAT_Amount	Total VAT amount	N12.2	M		1222
5	Invoice_Date	Document date YYYY-MM-DD	A10	M	The date printed on the document	1230
6	Invoice_Reference_Number	Document (reference) number	A20	O	Recommended to always transfer	1204

Success Response:

Http code	Http Message	More Information	Example
200	OK	Invoice confirmation number	<pre>{ "Status": 200, "Message": "Invoice confirmation number for the received data is: 20240704061109183186068226", "Confirmation_Number": "20240704061109183186068226" }</pre>
		If cannot retrieve information, confirmation number will be 0	<pre>{ "Status": 200, "Message": "Cannot retrieve information", "Confirmation_Number": 0 }</pre>

Error Response:

See chapter 5

4. Decision update service regarding an invoice that was held ^{new}

4.1 General

- This service will be operated on the supplier's side when the allocation number/ holding of an invoice is not provided in accordance with the decision of the Tax Authority (and not due to a hold resulting from an invalid invoice).
- The software manufacturers will present the user with 4 alternatives to continue the process on the invoice and will update the tax authority of the user's decision.

Possible alternatives:

1. **Abandonment/revocation of the invoice - Cancel**
2. **Continued generation of the invoice without an allocation number - Continue**
3. **Reversing the charge** - see Approval
4. **Request for Hearing - Further Objection**

If alternatives 1,2,4 are selected, the service described in 4.2 must be activated.

When choosing alternative 3, reversing the charge – the approval service must be activated as specified in Section 2.

4.2 Description of the service:

Invoice-decision

Version and status	V1.0(beta)
Sandbox url	https://ita-api.taxes.gov.il/shaam/tsandbox/InvoiceDecisionApi/v1/Cancel https://ita-api.taxes.gov.il/shaam/tsandbox/InvoiceDecisionApi/v1/Continue https://ita-api.taxes.gov.il/shaam/tsandbox/InvoiceDecisionApi/v1/FurtherObjection
Production Url	https://ita-api.taxes.gov.il/shaam/production/InvoiceDecisionApi/v1/Cancel https://ita-api.taxes.gov.il/shaam/production/InvoiceDecisionApi/v1/Continue https://ita-api.taxes.gov.il/shaam/production/InvoiceDecisionApi/v1/FurtherObjection

Version and status	V1.0(beta)
Authorizations	OAuth2: User Restricted
Header Parameters	Accept optional,
Application/json	Content-Type optional
Request Body Schema	Application/json

Request:

Table 4.1

Serial	API Field Name	Field Description	Field Type	H/R	Notes	Uniform File Field Number
1	invoice_id	Internal ID/Relationship	A50	M	Bookkeeping number/single-value ID reported during the allocation attempt	1243*
2	vat_number	Invoice issuer's licensed dealer number	N9	M	The dealer number reported at the time of the attempted allocation	1202
3	authorized_company	Corporation/Qualified Entity no.	N9	CM	To be included when the competent corporation issues the invoices	
4	user_id	Service Operator ID	N9	CM	Mandatory if no username is sent	
5	user_name	Service Operator Username	A25	CM	Mandatory if no user ID is sent	
6	accounting_software_number	Software registration number	N9	M	The registration certificate number of the software on which the document was generated If there is no certificate of registration, the Pvt. Co. number of the producer of the document must be indicated.	1006

Success Response:

Http code	Http Message	More Information	Example
200	OK	Success	<pre>{ "status": 200, "message": "Decision accepted" }</pre>
400	Bad request		<pre>{ "status": 400, "message": { "errors": [{ "code": 463, "message": "No matching unapproved invoice found", "param": "invoice_id", "location": "request" }] } }</pre>

Error Response:

See chapter 5

5. Error codes -Error Response Table:

Http code	Http Message	More Information	Help
400	Bad Request	Request includes logical incorrect data.	Check client side Json for syntax errors and check the error list.
401	Unauthorized	Cannot pass the security checks that are required by the target API or operation, Enable debug headers for more details	Make sure OAuth2 protocol is set and that the Token is up to date
403	Forbidden	You don't have permission to access this service	Check permission for the service
404	Not Found	No resources match requested URI	Check URI is correct
406	Not Acceptable	Server cannot fulfill request	Check permission for the vat_numebr (or customer_vat_number in case of paragraph 3)
422	Unprocessable Entity	Validate all objects sent according to schema	One or more of the parameters don't match the schema.
500	Internal Server Error	Error_Id	Make sure all permissions exist before contacting help desk.

6. Changes to the detailed report (PCN874 file)

"*Shortened* allocation number" – the last 9 characters of the allocation number

In the invoice record (movement record), both on the transaction side and on the input side, the *shortened* allocation number must be reported

Name	Technical Description	Notes
Record type (document type)	1)) A	See table of values attached
VAT file number – of the counterparty in the transaction	(9)N	In the transactions record- the counterparty is the customer In the inputs record - the counterparty is the supplier
Invoice date/reference number	N(8)	In YYYYMMDD format
Reference group	A(4)	
Reference number	(9)N	9 right-most characters
VAT amount on invoice	(9)N	Rounded to the nearest Shekel
+/- sign: credit/invoice for the account amount	1)) A	Cancellation/credit from supplier or to the customer is always a negative number
Invoice amount	(10)N	Always 100%, always positive, rounded to the nearest Shekel
Short Allocation Number	(9)N	Debit

Storno transaction to cancel an input: If the customer wishes to cancel an input invoice included in the PCN file and "rejected" due to incompatibility with the allocation number, it must omit the input invoice and the cancellation record - Storno.

7. Support

For your convenience, guidelines for utilizing the development and testing portal can be found at the following location:
